Organizations. When organizations have “flat” structures and consist of coalitions of people coming together with multiple loyalties, intersection of the organization with its environment being characterized by shifting boundaries; the informal nature of the work processes makes use of “open” systems approach towards organizations.

Open Systems Approach to Project Management in Organizations

An open system is the core concept in the open system approach to organizational analysis. An open system is a system that interacts with its environment for renewal and growth.

SOSA Open Systems Strategy - GOV UK

Systems theory is useful to management because it aims at achieving the objectives and it views organisation as an open system. Chester Barnard was the first person to utilize the systems approach in the field of management. He feete that the executive must steer through by keeping a balance between conflicting forces and events.

Beranlanffy who was a biologist developed the open system theory in 1956.

Explain the 'open systems' approach to organisations, and ...

Open systems theory is a way of thinking about dynamic systems, or systems that interact with their environments. All businesses are dynamic systems, evolving and changing in response to feedback. Open systems theory is useful for businesses because it provides a framework for thinking about processes such as change – a regular part of running a business.

The external subsystem here are the buyers or the customers who visit the store. Only when all these subsystems work together, the system is said to function effectively. Open and Closed System. The organization can act as an open or a closed system. An open system is the one where the elements of the system can interact with the environment.

Top 10 Characteristics of an Open System

TL;DR (Too Long; Didn't Read) The systems approach views an organization as an organic and open system made of interdependent subsystems. It was first developed in the 1960s by Ludwig Von Bertalanffy, Lawrence J. Henderson, Daniel Katz, W.G. Scott, Robert L. Kahn, J.D. Thompson and W. Buckley.

1. System approach considers the organisation as a dynamic and inter-related set of parts. Each part represents a department or a sub-system. Each department has its sub-system. Continuous and effective interaction of sub-systems helps to attain goals of the larger system. Thus, every sub-system is a system and has sub-systems which together make an organisation a set of mutually dependent parts and their sub-parts.

The emphasis in OD is that that real systems are open to, and interact with, their environments, and it is possible to acquire new properties through emergence, resulting in continual evolution.
