Post-editing Machine Translation Best Practices. Machine translation (MT) is continuously improving by becoming faster, cheaper, and more accurate. Yet it still has some way to go before it achieves parity with human translators. Post-editing machine translation (PEMT) helps combine the best of both worlds: the speed and ability of MT engines to quickly handle large volumes of text, with the skill and sensitivity of trained linguists.

MT Systems. Generic MT usually refers to platforms such as Google Translate, Bing, Yandex, and Naver. These platforms provide MT for ad hoc translations to millions of people. Companies can buy generic MT for batch pre-translation and connect to their own systems via API.

What is Machine Translation? | GALA Global

The obvious post-editing environment seems to be a translation memory (TM) system, but it is intended for a slightly different purpose and it needs to be directly linked to the MT engine in order to facilitate post-editing work (e.g. by avoiding rework on inline tags).

What is Post-Editing and Why is It So Hard? | GALA Global

Post-editing replaces conventional translation for MT projects. It is a skill that translators develop with time and experience – there is a learning curve associated with PE. The market makes a distinction between light and full post-editing and both concepts are explained in the course materials. The course explains the post-editing phase in detail and includes guidance on how to post-edit effectively as well as common patterns and behaviors of MT output to watch out for during post-editing.

Post Editing Machine Translation Gala Global

Post-editing (or postediting) is the process whereby humans amend machine-generated translation to achieve an acceptable final product. A person who post-edits is called a post-editor. The concept of post-editing is linked to that of pre-editing. In the process of translating a text via machine translation, best results may be gained by pre-editing the source text – for example by applying the ...
