### Risk and Uncertainty in the Twenty-First Century

Uncertainty is a condition where there is no knowledge about the future events. Risk can be measured and quantified, through theoretical models. Conversely, it is not possible to measure uncertainty in quantitative terms, as the future events are unpredictable. The potential outcomes are known in risk, whereas in the case of uncertainty, the outcomes are unknown.

### Difference Between Risk and Uncertainty (with Comparison)

Risk and Uncertainty. The concept of (fundamental) uncertainty was introduced in economics by Keynes (1921, 1936 and 1937) and Knight (1921). They felt a distinction should be made between risk and uncertainty. In case of risk all possible future events or consequences of an action or decision are known. However, the events that will actually materialise are unknown beforehand.
