Thyreophorans are characterized by the presence of body armor lined up in longitudinal rows along the body. Primitive forms had simple, low, keeled scutes or osteoderms, whereas more derived forms developed more elaborate structures including spikes and plates. Most thyreophorans were herbivorous and had relatively small brains for their body size. Thyreophora incl

Thyreophora - Wikipedia

Armoured dinosaurs were some of the earliest dinosaurs named, including the ankylosaur Hylaeosaurus in 1833 and Stegosaurus in 1877. But these armoured dinosaurs, or Thyreophorans, have been the least studied dinosaurs because they lack the visceral appeal of Tyrannosaurus and the fossil abundance of ceratopsians and hadrosaurs.

The Armored Dinosaurs (Life of the Past): Amazon.co.uk ...

One of the earliest known ankylosaurs, or armored dinosaurs, Dracopelta roamed the woodlands of western Europe during the late Jurassic period, tens of millions of years before its more famous descendants like Ankylosaurus and Euoplocephalus of late Cretaceous North America and Eurasia. As you might expect in such a "basal" ankylosaur, Dracopelta wasn't much to look at, only about three feet long from head to tail and covered in rudimentary armor along its head, neck, back, and tail.
