The essence of emotion understanding is the organization of information around discrete emotion categories. We regularly infer emotions from seeing somebody's facial expression, from hearing an animal's cries, from observing the way a person behaves in a crowd, or even just from reading a situation that a character is facing in a novel.

The neuroscience of understanding the emotions of others ...

At the heart of the concept of emotional intelligence is the belief that emotions originate in primitive parts of the brain. Because of this, even though emotions can cause instinct-based changes in behavior, the newer parts of the human brain (in evolutionary terms) and the higher functions such as reasoning and decision making that came with them, can override those changes.
